

学力検査問題 [英語] (その1)

(2022 一推)

解答はすべて解答用紙に記入せよ。

1 次の英文を読んで、下の問いに答えよ。

Everyone knows about pollution in the environment. The water, air, and land are all polluted, which means that pollution is everywhere. A Recently, scientists have been looking inside human beings to learn about body pollution.

In 2015, a team of Spanish scientists tested body tissue from nearly 300 adults. They measured the amount of certain pollutants in these tissues. The results of the study were worrying: the adults with the most pollutants in their bodies [likely more to were] be obese. B They had higher levels of cholesterol, a major risk factor for heart disease, as well. Another study from 2003 found that people had an average of 53 cancer-causing chemicals in their bodies. (1) They also had an average of 62 chemicals that can damage the brain and 55 that can harm babies in pregnant women. In many cases, the amounts of these chemicals were so small that they were probably not hurting people. Nonetheless, scientists are concerned because most of these substances were created by humans, and (2) they did not exist eighty years ago. This proves that we have not only polluted the world—we have polluted our own bodies! But how?

[Reading for the Real World Intro 3rd edition by Eric Prochaska, Anne Taylor, Peggy Anderson, Compass Publishing, 2015]

注 tissue : 組織 obese : 肥満の

- [] 内の下線を施した語句を並べかえて、英文を完成せよ。
- 下線部 A を和訳せよ。
- 下線部 B を和訳せよ。
- 下線部 (1), (2) の代名詞が指すものを、それぞれア～オのうちから1つ選び、記号で答えよ。

ア humans イ most of these substances ウ people エ pregnant women
オ scientists

2 次の各文の () 内に入れるのに最も適当なものを、ア～シのうちから1つ選び、記号で答えよ。

- The old urban area is located () the river.
- () these three choices, I recommend the second one.
